

# DAVID*active*

## Active Compact Speaker

DAVID Active - a real classic continuously perfected.

Can it be done, discrete bi-amping with an active crossover in a speaker this size?

30 years ago the DAVID was designed to be the world's smallest HiFi loudspeaker. Since, it has taken the world by storm, especially in the professional studios and public places.

As all loudspeaker manufacturers know the choice of material to be used for the casing becomes a vital part of the resulting sound quality. All too often loudspeaker manufacturers prefer to use the manufacturing-friendly plastic. Not so with Visonik! For the David 5001 only a casing made from **solid aluminum** will do.

For your listening pleasure! Now a new era has arrived: the "active" DAVID.

Our classic loudspeaker has been fitted with an extraordinary **digital power amplifier**.

First of all, audio signals are separated for the tweeter and bass-midrange sections through an **active crossover network**, and then each amplified with a solid 15W power amplifier. Thus a passive crossover can be omitted.

YES, it can be done, but only at VISONIK!

VISONIK - Ideen die man hört!

### Technical Data:

Power: 30W  
Supply: DC 12V 2.5A  
Frequency: 120 Hz - 20 kHz  
Input: Cinch RCA

Size Bass: 100 mm  
Size Tweeter: 19 mm

Dimensions: 110 mm (W)  
170 mm (H)  
100 mm (D)

Colours: black
